About us

Avaxxine is an ERC-20 token launched on the Avalanche Network, created with the sole purpose of reducing the financial burden of healthcare from medical emergencies, even those stemming from natural disasters, disease and even civil wars. Our mission is to provide relief from financial stress in unforeseen or unfortunate situations.

Synopsis

Avaxxine is forging a new future for Charity driven cryptocurrency projects.

Our team is creating a new path for individuals to not only pay medical bills through the use of cryptocurrency, but also to donate to charitable causes, organisations and humanitarian efforts around the globe. Cryptocurrencies can allow international organisations to receive donations, assistance and aid in a matter of minutes, all without the delays of traditional money transfer methods.

The Avaxxine team is strongly committed to giving back to our community and others through weekly charitable giving opportunities. Our contract was created with a 4% buy and sell tax that goes to our Charity Wallet which will allow us to provide financial support to those in need, anywhere on the planet.

Our Goals

- Develop a medical centric blockchain for use in Hospitals, Non-governmental Organisations (NGO's) and Charity Organizations
- Develop the Avaxxine Trading Station (State of the Art trading view and swap to allow for easy trading)
- Create the first Charity/Medical Stable Coin to be universally accepted as payment for medical bills.
- Create the first Crypto Medical Education Fellowship
- Donate to charitable causes every week

Goals

The Avaxxine Future BlockChain

As stated in the synopsis, one of our goals is to create a medical and charity centric blockchain that will integrate with hospital systems to bring cryptocurrency into the world of medicine. Our goal will be to introduce hospital systems, charity organisations and many more, to the simplicity of blockchain technology as a tool to better help patients, staff, and management.

With the interest in cryptocurrency growing at an extremely rapid rate, it seems only prudent that we step in front of this growth spurt and develop a system that can allow individuals to actually utilise their digital assets to better their health, and the health of others.

Our blockchain will be focused on supplying the medical world with the necessary infrastructure in order to accommodate and legitimise cryptocurrency as a payment method. Medical bills are often expensive and having to convert funds from crypto to FIAT can be expensive as well. The digital age is here and we need to embrace crypto as the future of finance.

Our blockchain will feature its own blockchain explorer, its own native currency, as well as our stable coin. The names and titles of each are yet to be announced.

The Avaxxine Trading Station

With the rapidly growing cryptocurrency community, there needs to be a rapidly growing source of tools for people to use. Our desire is to create value for our community by giving them the best tools on the market that are available today. This is why our Trading Station will include the following features:

- Live easy to read charts
- Portfolio value tracking
- Built in multi-chain swaps
- Native bridging service to convert across chains
- Price movement alerts for selected tokens

We believe that we can provide our community members with useful tools to make their trading lives easier and simpler.

The Avaxxine Charity & Medical Stable Coin

In order for us to successfully integrate into hospital systems, we need a legitimate and functioning digital currency that is not volatile. To do this we must create our very own stable coin. While this requires a significant amount of financial backing, we believe that the potential of this project is significant. The proceeds of our project will go towards backing our future stable coin.

Our stable coin will be created on our native blockchain upon its deployment, and once that is completed we will begin extensive testing of our internal infrastructures while we liaison with hospitals and NGO's. We wish to create an ecosystem to benefit all people from all walks of life. Everyone is human, and with being a human the necessity of healthcare. It is time we introduced Cryptocurrency to the world of modern medicine

The Avaxxine Medical Fellowship Program

Avaxxine believes in the power of the healthcare industry. We want to prove that belief by sponsoring the next generation of doctors, nurses, and hospital technicians through medical school. Students who are currently going to medical, nursing or tech school will be able to apply on our website to become an Avaxxine Fellow and receive tuition and housing assistance whilst they attend their medical training.

Cryptocurrencies have so much potential to change peoples lives, and due to that power we believe we have a responsibility to use that influence for the greater good.

Charitable Giving Opportunities

Every week the Avaxxine team will be donating to different charities and individuals around the world who are in desperate need of financial assistance.

Our website will have a form to submit for people who are seeking help, and we will review each submission on a case by case basis and reach out to each individual or cause.

We will poll our community each week to help decide which charities we will be donating to in order to ensure that our funds are used wisely and go to where they are needed the most.
